Agenda

- 01 Summary
Our objectives and approach
- 02 Findings
What we learned and how we plan to use it
- 03 The Proof of Concept
What the design needs to achieve
- 04 Appendix
Further research findings

Summary

Timeline / Schedule

Our proposed user flow will increase in fidelity as we grow in confidence that users find it useful and impactful

Our Focus

Understanding Grouping Logic

To design grouping logic that will make sense for our users, we needed to understand how they plan, prioritize, and manage opportunities as part of their overall workflow.

We focused primarily on Renewal Managers, but also considered Renewal Specialists and leaders.

Our Approach

SME & User Interviews

We have interviewed Subject Matter Experts, Renewal Managers, Renewal Specialists and Leaders to understand their workflow for managing and prioritizing renewal opportunities

SME / User Interviews

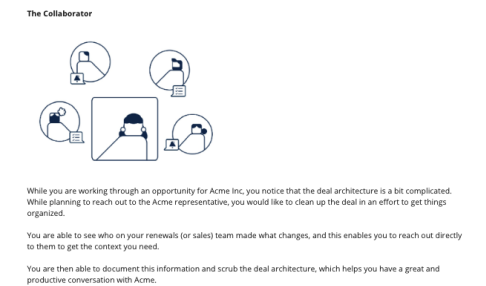

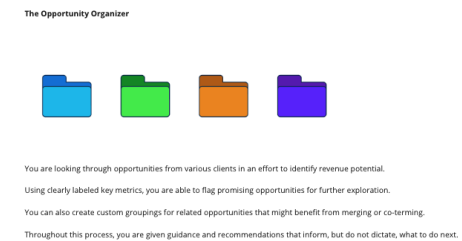

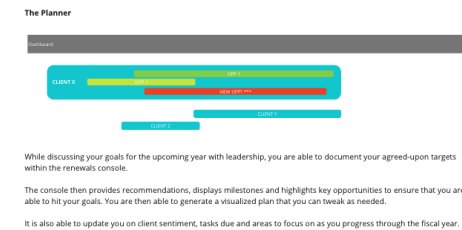

Methodology

One hour of generative research: focused on open-ended questions aimed at identifying how people go about their work

A discussion about workflows was followed by a round of concept evaluation of four possible future states

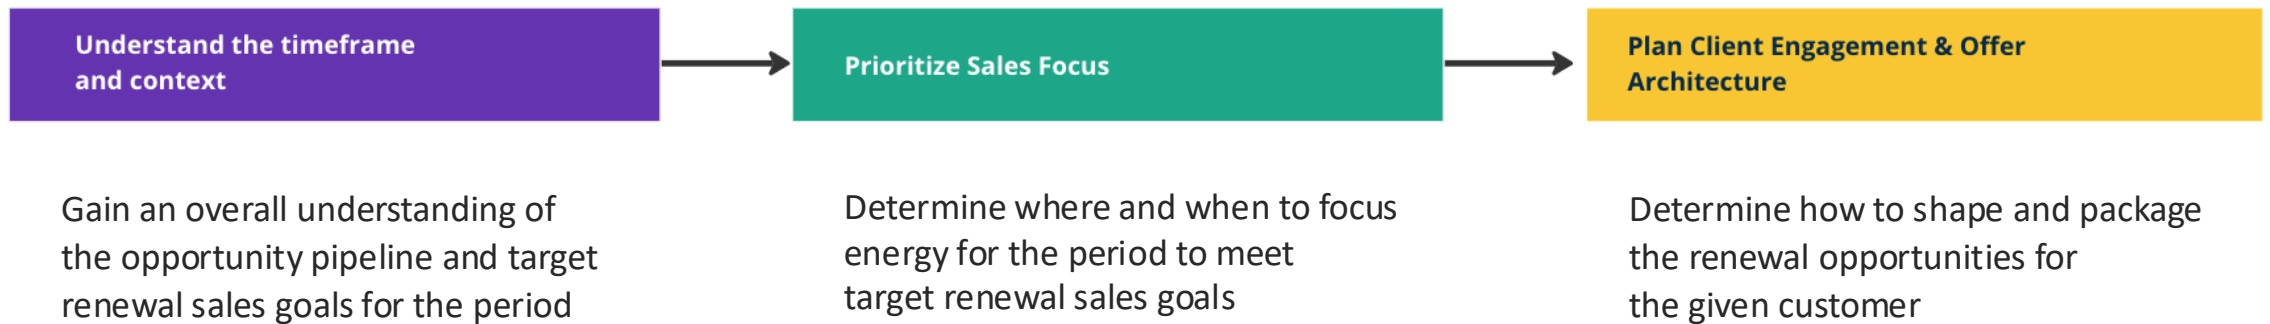

We spoke with:

- 10 Subject Matter Experts (SMEs)
- 13 Users:
 - 5 Renewals Managers
 - 5 Renewals Specialists
 - 3 Renewals Leaders

Findings

The Opportunity (In-Console) Workflow

After discussions with SME's, we realized that there are three primary modes of working within the console.

By identifying key variables used to make decisions at each stage, we begin to establish ways to organize opportunities that are more in line with the team's thought process.

By speaking with users, our intention was to further define what these considerations might be.

Common Goals Across Workflows

Everyone shares common objectives:

- Moving the opportunity further along the customer life cycle stages
- Arriving at a structured offer that works for the client
- Coordinating and communicating client status
- Arriving or facilitating delivery of an enterprise agreement, CXEA or a la carte

However, the process to achieve these objectives differs across teams and segments.

Understanding timeframe and context

User Actions:

- Plan and prioritize for the time increment in question
- Contextualize the time period in relation to the fiscal year
- Review components and degree of complexity of the deal
- Review opportunities that are related or due for renewal soon
- Determine if co-terming or consolidation is possible
- Understand the time horizon for opportunities
- Ensure pipeline visibility / Forecast preparation
- Discuss and collaborate with leaders and team members on forthcoming client engagements

Key Metrics / Inputs:

- Renewal date
- Risk measurement
- Stakeholders (including partners)
- Expiration
- Opportunity notes
- Suitability for co-terming or merging
- Milestones (dates)
- Attrition

“As a leader we feed the backend data to our RS team, and they use a cut down version with their info to plan and prioritize their renewals.”

Understand the timeframe and context

Today all of the planning that RMs do is outside of the console. (Excel)

There is NO summary view.

What is the objective in the 'summary view' for the user?

Need a summary view: holistic, what other risks of oppty, who are the stakeholders,

all of the different actions are NOT on the console today, have to go to other tools.

ted

Not convenient

Users create their own summary views to understand their opportunities

Renewal Managers and Specialists want to be able to visualize opportunities by client over time. Leaders may be interested in curating opportunities by contributor / RM.

Their home-grown solutions give us insights into what is important for decision-making. We will leverage the solutions they have created when designing the future-state solution.

Want to see all of these dates

Want to see all of these dates

The Planner

While discussing your goals for the upcoming year with leadership, you are able to document your agreed-upon targets within the renewals console.

The console then provides recommendations, displays milestones and highlights key opportunities to ensure that you are able to hit your goals. You are then able to generate a visualized plan that you can tweak as needed.

It is also able to update you on client sentiment, tasks due and areas to focus on as you progress through the fiscal year.

"In managing it, I like being able to see visually... and milestones are good to see."

"I like the idea of time frame per customer"

"Upselling recommendation (per opportunity) looks good."

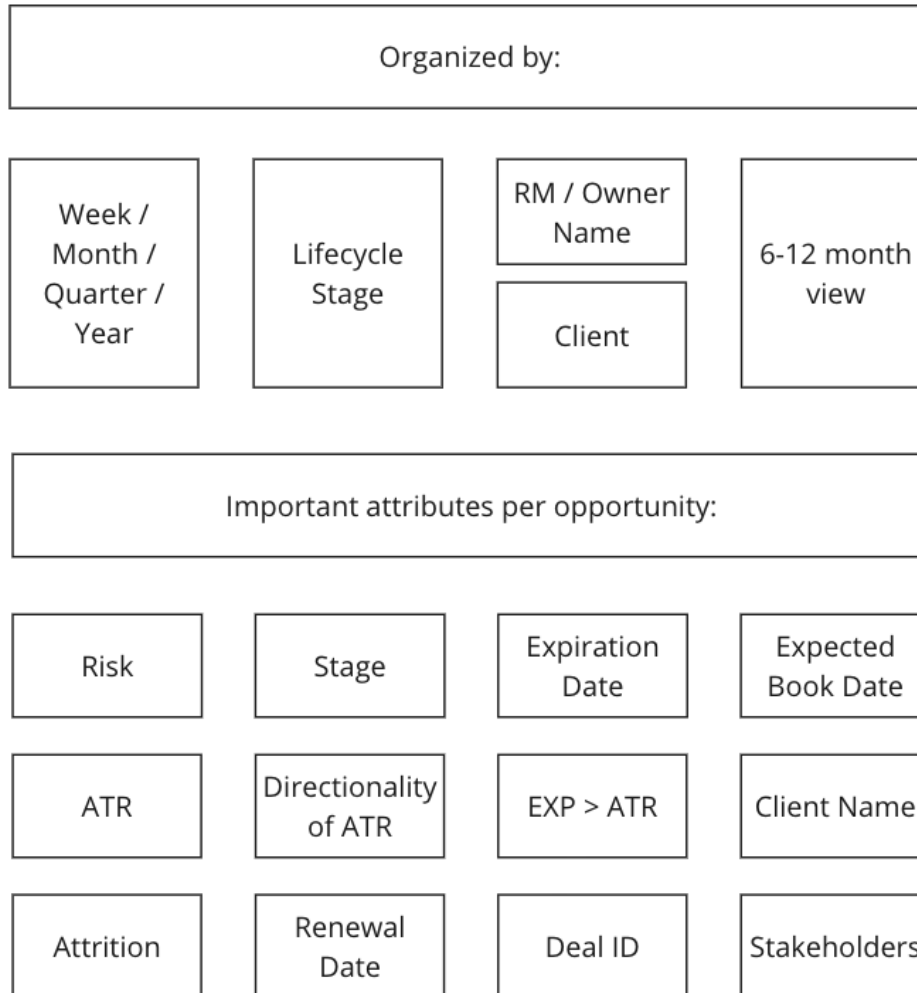

"Too good to be true - We had a huge excel file (overview) - it's too complex and too hard to read."

What users want from a timeline view

Presenting opportunities in a visual way over time would help users plan and prioritize work and mitigate parallel workstreams and outside tools

As part of our concept evaluation, we presented a rough concept for a customizable planner application

Users across roles reacted mostly positively

Opportunity grouping should help users understand the relationship between opportunities over time

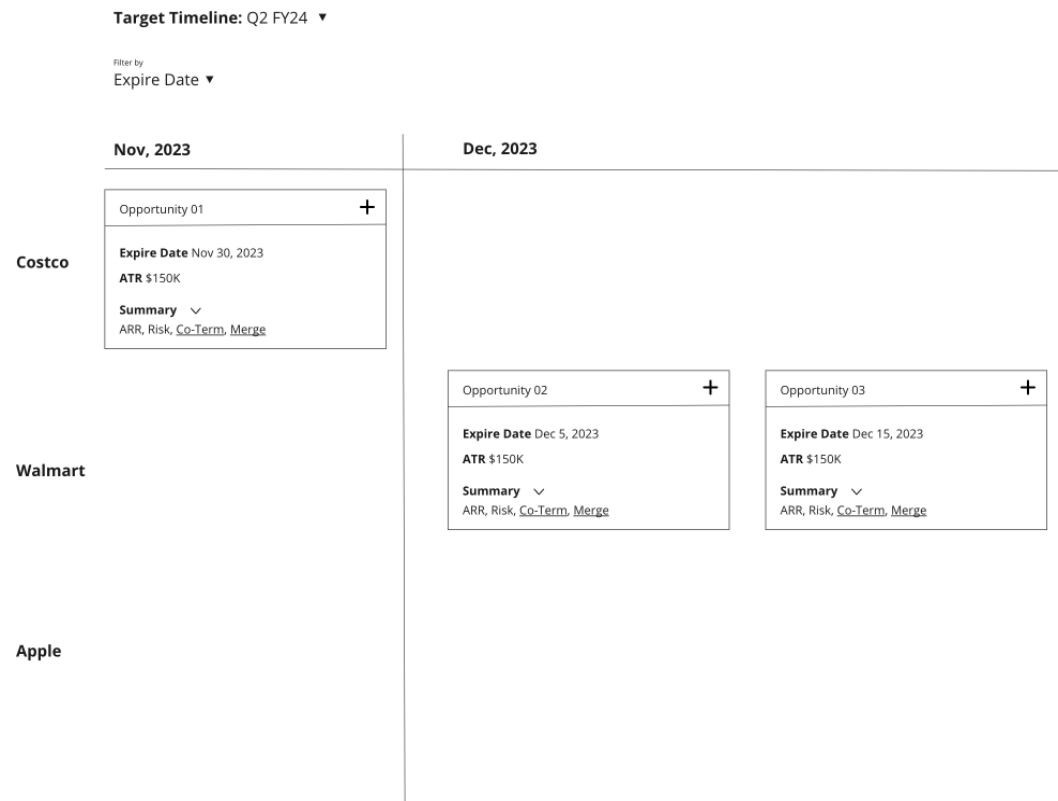

Renewal Managers and Specialists want to be able to visualize opportunities by client over time. Leaders may be interested in curating opportunities by contributor / RM.

Key considerations at this phase of work should be easily accessible/legible and include:

- Risk
- Stakeholders (RS / Partner actions)
- Renewal Date (along with expected book date)
- Deal ID
- Contributor / Owner
- ATR (And Directionality)

Clustering opportunities into user-customizable groupings will help keep the multitude of opportunities manageable

"A more cohesive way to show that things are connected, but still be able to move things around."

A timeline view should help users understand both the current time frame and adjacent periods of time

Grouping opportunities by client helps contextualize the current period against what is coming down the pipeline

- Finding candidates for merging or co-termining is an important part of opportunity planning
- Understanding how different opportunities are sequentially related is essential in approaching clients with a sensible proposal
- The majority of users find milestone callouts useful
- Understanding the pipeline is essential in effective prioritization
- Users should also be able to view this timeline per customer

Prioritizing Sales Focus

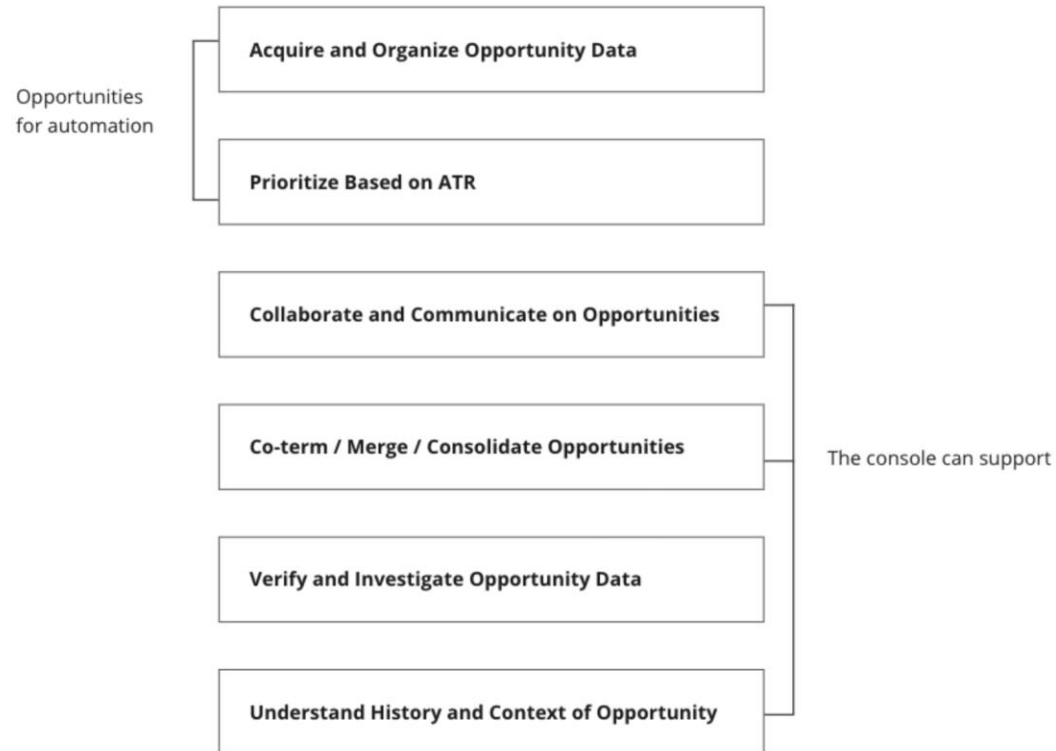

User Actions:

- Acquire and collaborate around Cisco Ready report
- Determine if data can be combined into one partner
- Prioritize based on ATR
- Begin to look at client status / check for past renewal / install base status
- Verify data in CCWR
- Make sure that opp ATR matches the deal ATR
- Find out who the partners are and check in with them
- Understand the status of the incremental sales
- Link or review linked opportunities
- Who is the client-side decision maker?

Key Metrics / Inputs:

- ATR
- Expiration dates
- Stage
- Linked opportunities
- TCV
- Prior ATR
- Directionality of ATR is even more important here

-
- Renewal date
 - Risk measurement
 - Opportunity notes
 - Suitability for co-terming or merging

Renewal teams must work through many challenges to prioritize and collaborate on opportunities

By automating the data pull, surfacing opportunities directly into the renewals console and sorting by ATR, we can set users up to properly understand the account history and begin work.

There are also opportunities to facilitate opportunity consolidation, collaboration and context setting.

The Opportunity Organizer

You are looking through opportunities from various clients in an effort to identify revenue potential.

Using clearly labeled key metrics, you are able to flag promising opportunities for further exploration.

You can also create custom groupings for related opportunities that might benefit from merging or co-termining.

Throughout this process, you are given guidance and recommendations that inform, but do not dictate, what to do next.

Custom groupings is the MOST exciting thing you said to me yet.

"Have a 'parent' optie with children opties underneath."

"Today it takes a lot of time to make custom filter"

"Maybe Renewal Sellers could group opties by which ones are identifiable targets for upsell."

Users want to organize opportunities in custom groups that allow them to focus on what's important

As part of our concept evaluation, we showed users a concept around custom groupings for opportunities. A vast majority of users were excited about this possibility.

In addition, participants mentioned:

- The need to call to or flag opportunities to upsell or cross-sell
- The importance of easy-to-use custom filtering
- Creating a stack of "high priority" opportunities

“It feels like nothing I do is right anymore, so I only go in to fix things that my boss tells me to fix.”

Renewals Leader – Referencing their team's sentiment on managing opportunities

Prioritize Sales Focus

We should merge all of these together. Not based on architecture .

BackContinue

"When we do a Multi-merge the expected values do not carry over and it creates fake attrition."

Users want to combine as many opportunities as possible, but need guidance

Clearly labelling suitable co-terming or merge opportunities will help users combine and simplify their work.

Users specify that they would prefer having a single parent opportunity with multiple child opportunities per client.

Strong visual callouts when good candidates for merging or co-terming are present will help to drive user focus.

It may be helpful to suggest suitable, merge-able opportunities upon the user selecting a given opportunity.

Users would also like a more intuitive way to merge than what is currently available and have called out some issues with data quality once opportunities are merged.

"The trajectory of ATR is equally important as ATR as a whole"

Surfacing (and merging) important inputs enables deeper understanding of conditions at a glance

Creating information graphics that encompass more than one key consideration would help users understand conditions at a glance.

For instance:

- ATR and ATR directionality
- Baselines, tolerance for what is considered positive or ideal conditions
- Icon language for type of offering (service, wireless etc)

Prioritize Sales Focus

"I'm always looking at the Renewal Risk, but it doesn't help us that much - because we are focused on the macro level and everything that is going on with the customer"

"We don't know where the info for Risk is coming from. Would like to have more transparency on where data is"

"Risks that are put into our tools are just noise."

Risk Modelling needs attribution and guidance

Users would like to understand the risk modelling method as there have been several different measurements in the past.

Users would also like to know who the last person was (and possibly their role) that modified the degree of risk.

Being able to drive the next, necessary action would also help users be more proactive in de-risking.

The risk model has changed so many times. Also, due to the lack of transparency of who owns and controls the data, Renewal Sellers mainly disregard the guidance of risk w/i the tool.

Plan Client Engagement & Offer Architecture

User Actions:

- Review focus areas from their leadership and determine relevant clients attached to opportunities
- Build offer architecture
- Deal approvals (discussions with Finance)
- Collaborate and discuss sales strategy with team members (ex: Renewal Specialists and Partners)
- Understand pipeline and time horizon
- Review key milestones
- Understand history of the client relationship (product mix)
- Prepare for client discussions

- Review usage data / telemetry

- Reach out to partner or team members to understand / manage auto renew status

Key Metrics / Inputs:

- ATR / directionality
- Renewal / renewal dates (relationship between timing of renewals)
- Stage
- Risk
- Merge and co-term eligibility
- Upsell or cross sell opportunities
- Auto renewal information
- *Partner actions*

Prioritize Sales Focus

Users need to seamlessly shift from an opportunity-centric workflow to a client-centric one

Users will browse opportunities to:

Looking for high value opportunities

Hunting for candidates to upsell or cross sell

Figure out where to start

However, they also look through all opportunities belonging to a certain client in order to:

Prepare for a client discussion

Build an offer structure for that client

Looking for opportunities to co-term or merge

The interface should support both approaches (and shifting between them)

Plan Client Engagement & Offer Architecture

Metrics: ATR tracking, Expected VCV, Past renewal?, Expiration dates

"Hunting" for dollars

Activities

- Hit a specified ATR
- Tweaking the offer
- Browse opportunities looking for cross or upsell opportunities

Understand the customer relationship

Activities

- Subscription status
- Understand incremental sales status
- Account history
- Assess risk and de-risk
- Identify and check in with partners
- Prepare for client discussions
- Linking opportunities
- Understand usage (install base)

Negotiating and tweaking opportunity

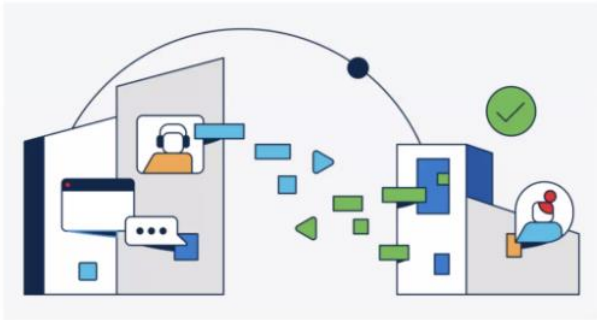

Activities

- Client discussions
- Curating the offer structure
- Quoting
- Forecasting
- Merging and consolidating
- Co-terming

Renewal Managers need tools that facilitate a client-centric workflow

Building an ecosystem that serves these intentions is crucial is fulfilling the product promise / vision:

- Helping users find more revenue per account
- Enable users to quickly understand what has happened so far on the account (at a glance)
- Facilitate client conversations on offer structure

While planning for an important client discussion with Apple Inc, you are able to view all of Apple's opportunities and sort them as needed.

Some sort methods include: by ATR, ARR and risk (any other important criteria?). Opportunities that are good candidates for co-terming or merging are highlighted.

You are also able to use this capability in discussions with Apple's representative in shaping and tweaking the details of the deal architecture collaboratively.

"I need a more cohesive way to show that things are connected, but still be able to move things around."

"Architecture segmentation would be good to sort by."

"Being able to sort by which part of the business I'm going after."

"If the tools could give insights into what the customers are consuming that would be awesome."

Renewal Managers want a tool that can both help them organize offers and facilitate discussions with clients

We shared a concept around sorting opportunities to structure a deal with participants. Most users, particularly Renewal Managers, found this useful.

We also heard that:

Partners are an important part of this workflow, and there should be further research into how to integrate them into this workflow (auto renewal access)

The Concept and Usability Review

Usability Review Objectives

The Concept for Review

The goal now is to draft and iterate on a user flow that provides a timeline view, an opportunity browsing view and a client-centric view.

By providing users with the functionality discussed today, we should be able to take what we learn in the forthcoming research to begin discussions around feasibility and implementation (what a reasonable MVP looks like).

The Research

30 Minute sessions involving a user review of the above (mid-fidelity) concept that would involve:

- User feedback on usefulness
- Discussions around how the user might achieve key tasks like investigating the history of an opportunity and working through a list of opportunities
- Follow up questions around what is working and what is not

This round of participant review would give us the inputs we need to proceed to high fidelity mockups and deeper discussions with the development team

Next Steps

Recruiting

We would ideally like to begin user testing before the holiday break. We would like the product team's help in recruiting:

- At least 15 individuals
- Half renewal specialists and half renewal managers
- Have a list of candidates by end of week (Dec 15) to begin the scheduling process

Research Plan, Mockup and Facilitation guide

The design team will now build the research protocol. This consists of:

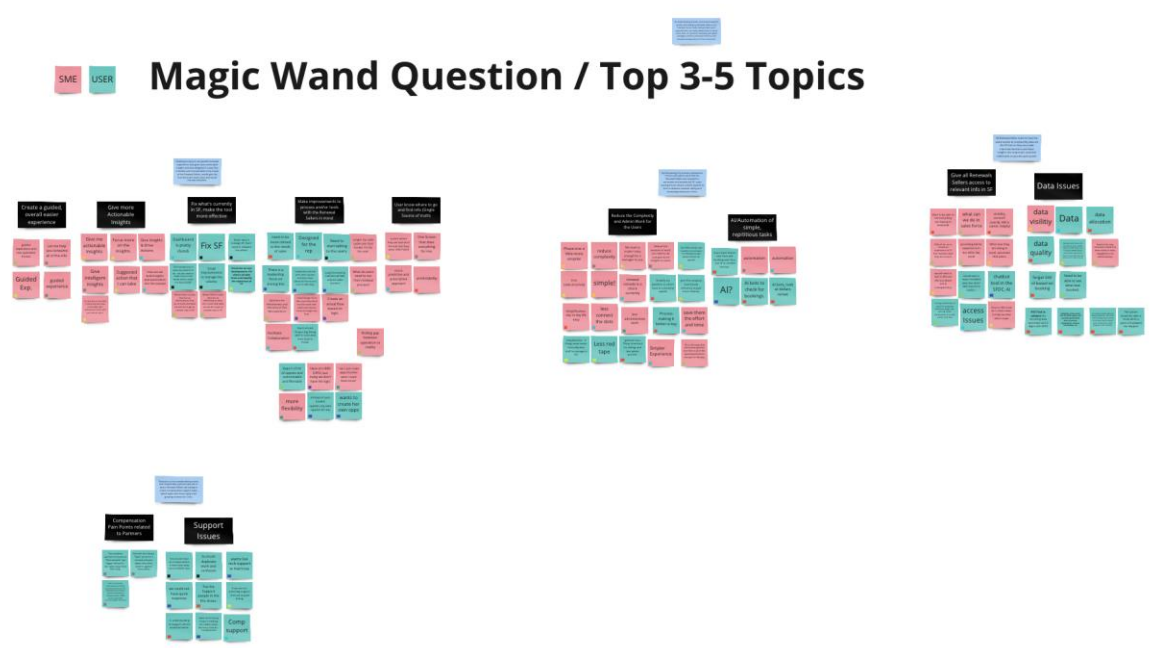

- Open concepting and drafting
- Facilitation guides
- Preparing the concept for user evaluation
- January 12 review

Appendix

Users want systemic change

Users want to have clear and consistent guidance when changes to process are implemented, a more accurate and accessible data set, reduced administrative time and more time with sellers

Lack of transparency working with partners, support issues, clarity in compensation, the need for a seller focused experience, a single source of truth and a desire for more actionable insights were also consistent themes

Prototype Functionality

Finding

- Users need a view of both the period of time currently in review and adjacent periods of time in order to best structure renewal offerings
- Users sometimes struggle with large piles of opportunities because their ultimate goal is to prepare for a client discussion
- It is difficult for users to curate opportunities at certain phases in the workflow (where a shift in focus is needed at different stages)
- Managers want to see opportunities tied to contributor in order to have efficient check-ins

Recommendation

- An interactive and dynamic calendar tool would help users contextualize the work that needs to be done and further organize and act upon opportunities
- Being able to sort opportunities by client in the calendar view would help keep things organized and help Renewals Managers prepare for client conversations
- Enable a sortable, filterable view for opportunities with the ability to tag and group
- Allow managers to track opportunities by Renewals team member

Prototype Functionality

Finding

- Different key metrics are used to make decisions at different stages in the workflow
- Users want clear guidance and support at certain particularly challenging stages of opportunity curation (grouping and merging)
- Users have a difficult time identifying the nature of opportunities at a glance
- There is a very high density of information that may overwhelm users throughout the process

Recommendation

- Create sort parameters that enable user awareness of key metrics – allow users to bucket based upon these (or custom parameters) and track behavior
- Create callouts for opportunities well suited to merging or co-terming across all phases of work
- Clearly label opportunities as architecture, wireless or switching (at a summary view level)
- Gradually reveal key considerations to users when they need them – not all in one view

Prototype Functionality

Finding

- Opportunity notes can be confusing and are not always useful
- Renewals sellers feel that the current tool set is, "not for them."
- Users are motivated by commission
- Not only are key metrics like ATR important, the overall directionality of these inputs play a part in decision making

Recommendation

- Finding a way to codify opportunity notes into tags would create a user customizable set of sort criteria (ex: renewal / prior contract)
- Above all else, allow user customization (but establish a clear framework for them to work within)
- Prominently display impact to commission wherever possible to encourage engagement and usage
- Design information graphics that combine multiple inputs essential to making decisions at a glance

Prototype Functionality - Edits

Finding

- Users need a view of both the period of time currently in review and adjacent periods of time in order to best structure renewal offerings
- Users sometimes struggle with large piles of opportunities because their ultimate goal is to prepare for a client discussion
- It is difficult for users to curate opportunities at certain phases in the workflow (where a shift in focus is needed at different stages)
- Managers want to see opportunities tied to contributor in order to have efficient check-ins

Recommendation

- Allow users to understand how a customer's opportunities appear over time
- Being able to sort opportunities by client in the calendar view would help keep things organized and help Renewals Managers prepare for client conversations
- Enable a sortable, filterable view for opportunities with the ability to tag and group
- Allow managers to track opportunities by Renewals team member

Not
convenient

Recommendation:

Reveal important considerations at key moments over the course of the user flow

Users will browse opportunities to:

- Looking for high value opportunities
- Hunting for candidates to upsell or cross sell
- Figure out where to start

However, they also look through all opportunities belonging to a certain client in order to:

- Prepare for a client discussion
- Build an offer structure for that client
- Looking for opportunities to co-term or merge

The interface should support both approaches (and shifting between them)

Key Insights

Opportunity notes' content can be used to tag and filter individual opportunities

Users want to centralize opportunity notes to make it easier to make changes and keep track of things

There may be an opportunity to use the content of opportunity notes as filterable inputs into how RM's might want to organize them
