SUMMARY

Product/UX Designer with 10+ years of experience transforming ambiguous product challenges into scalable, intuitive enterprise SaaS and AI experiences. Skilled in end-to-end product design, user research, interaction design, and cross-functional product strategy, with a reputation for simplifying complex systems and translating user insights into actionable design direction. Collaborative design partner who aligns product, engineering, research, and business stakeholders around user needs and scalable solutions.

CORE COMPETENCIES

Product / UX Operations & Strategy: End-to-End Product Design | Enterprise SaaS | AI Product Design | UX Strategy | Interaction Design | User-Centered Design | User Research | Usability Testing | Rapid Iterative Testing & Evaluation (RITE) | Information Architecture | User Journeys | Wireframing | Interactive Prototyping | Design Systems | Workflow Optimization | Concept Development | Personas | Use Cases | Heuristic Evaluation | Competitive Research | Affinity Mapping | Stakeholder Alignment | Cross-Functional Collaboration | Workshop Facilitation | Accessibility (WCAG)

Technical Skills & Platforms: Figma | Figma Make | Claude (AI-assisted prototyping) | React | TypeScript | Salesforce (SFDC) | Miro | Jira Align | Confluence | Qualtrics | Adobe Creative Suite - Photoshop, Illustrator, XD, After Effects, Premiere | Sketch | InVision | Balsamiq Mockups | Google Analytics | Optimal Workshop

SELECTED PROJECTS

Advanced AI Revenue Workspace | Side Project

Design and prototype | 2026 | Figma, Claude, React, TypeScript

- Proposed a unified AI-assisted workspace for New Sales, Renewal Sellers, Customer Success, and their leaders, replacing role-specific consoles with one consistent workflow: SSO or manual login, role selection, role-based home, and customizable layouts.
- Designed Account, Board (Kanban), and Timeline views that bring assets, customer information, deal history, CPQ, and RFPs into one place, with unified contact management for better deal visibility and continuity with customers after a deal is lost.
- Defined where AI works autonomously and where people stay involved: AI-drafted RFPs and sales pitches are reviewed by people (Human-in-the-Loop), while autonomous analysis can be verified through reviewable sources.
- Introduced reporting for sellers and leaders with goal tracking, incentive visibility, and consistent templates; created the Yoomi brand identity in light and dark themes, reviewed against WCAG for both design and code.
- Designed in Figma and built the working prototype with Claude, React, and TypeScript.

PROFESSIONAL EXPERIENCE

Senior Product Designer | Cisco / Cisco IT Team

San Jose, CA | February 2022 – July 2026

Lead enterprise UX strategy and product design across Salesforce Renewals, New Sales, and AI-enabled workflows, simplifying complex systems and structuring scalable information architectures. Partner with Product, Engineering, Business Operations, and UX Research to shape roadmaps, guide quarterly releases, and align solutions with user needs.

- Contributed to a 5% increase in ARR across 5,000+ users by designing and validating a Renewal Risk dashboard that improved visibility into $200M+ in annual deals and strengthened trust in risk scoring.
- Positioned customer-information workflows to save up to 20% of user time across 150,000+ annual sales opportunities by helping define an AI product strategy that addressed context switching across 30+ disparate tools.
- Partnered with UX Research to map user journeys, synthesized 100+ AI use cases across 7 affinity themes, facilitated an “Art of the Possible” stakeholder workshop, and developed near-term conversational and long-term dashboard interaction concepts using Human-in-the-Loop and Human-on-the-Loop frameworks.
- Unified account, pipeline, and renewal data into a single dashboard that accelerated access to customer insights and reduced cross-system searching.
- Reduced MFA bypass form drop-off and support demand by streamlining the request lifecycle, automating manual inputs, clarifying eligibility, and partnering with Security Engineering to balance compliance with user efficiency.
- Aligned cross-functional leadership on a scalable next-generation Salesforce Renewals Console by translating fragmented account and opportunity workflows into a grouping-logic framework and interactive concepts that simplified navigation, reduced administrative effort, and unified renewal data.

- Strengthened roadmap visibility across recurring releases by structuring project intake, aligning priorities with user needs, and partnering cross-functionally to support post-launch optimization.

User Experience Designer | Poly / XD Team

Austin, TX | August 2018 – July 2019

Owned UX design responsibilities for Poly's conferencing product portfolio, supporting embedded digital experiences across hardware and software environments. Served as a design partner throughout the product lifecycle, balancing user needs, technical requirements, and brand consistency while contributing to product direction and experience quality.

- Delivered the production-ready UX/UI for the Trio 8300 conference phone through successful product shipment by serving as the sole UX Designer responsible for adapting the touch-based Trio product experience to a 2.5-inch, button-driven interface.
- Created screen designs, icons, graphical components, and interactive prototypes while collaborating with developers, product managers, marketing, and sales.
- Improved design validation and usability across the Trio product line by restructuring information architecture, mapping user tasks and personas, and partnering with UX Researchers to identify interaction friction through usability testing and translate findings into high-fidelity wireframes and interactive prototypes.
- Strengthened visual consistency and scalability by building a reusable library of icons, UI components, and design assets to support current and future product experiences.

Senior User Experience Designer | Samsung Techwin / Design Group

Seongnam, Korea | January 2011 – June 2016

Led UX/GUI design for security-surveillance products and web-based applications, supporting both current product enhancement and future-state experience strategy. Collaborated closely with product planning and development teams to translate complex technical requirements into intuitive, scalable user experiences across evolving surveillance platforms.

- Simplified product discovery and configuration across the Product Selector, Field of View Calculator, and Bandwidth Calculator by redesigning a complex web experience, introducing three intuitive search methods, developing usage-scenario guidance, and eliminating redundant decision steps for customers configuring surveillance products and systems.
- Improved usability and workflow clarity across security-surveillance applications by leading UX/GUI design for Samsung Security Manager and the 4K Fisheye Web viewer, translating complex monitoring requirements into user-centered interfaces and supporting continued software enhancements.
- Helped shape future cloud-based surveillance experiences and more flexible information architecture as a selected member of the Vision Task Force, collaborating with product planning and development teams to explore future business models, product concepts, and scalable system structures.
- Streamlined complex product-design cycles and cross-functional execution by coordinating UX requirements, schedules, and design decisions across product planning and development teams.

SELECTED UX RESEARCH & INDUSTRY CONTRIBUTIONS

Opioid Overdose Prevention Project | 2018

- Developed user scenarios and a mobile app prototype grounded in user research; project accepted for presentation at UXPA Conference 2018.

Dual-Screen Device UX Research | 2018

- Conducted literature research to inform hand-grasp and thermal usability testing, identifying potential use cases, device postures, and user scenarios.

Eye-Tracking Study of eWOM Behaviors in E-Commerce | 2017

- Designed and conducted an eye-tracking study examining how users read online reviews and how review patterns influence purchasing decisions.

PATENTS & RECOGNITION

- 9 Patents — Security Surveillance Monitoring Systems | Samsung Techwin
- Top 10 Finalist — Company-Wide AI Hackathon | Cisco, 2025

EDUCATION

Master of Science in Information Studies | May 2018 | The University of Texas at Austin | Austin, TX

Specialization: UX Research, UX Design, User-Centered Design, Human-Computer Interaction (HCI), Information Architecture, User Interface Design, Usability Testing, Prototyping, Taxonomy

Bachelor of Engineering, Industrial Design | Handong Global University | Pohang, Korea

Specialization: Product Design and Graphic Design
